

Product Information

Product designation:

Polymer S

Product group:

Paintwork preparation

Product description:

Polish for strongly weather-beaten/contaminated paints. Paintwork care using the one-step method (cleaning and preserving) alternatively to the "classic" system care with paintwork cleaning compound and wax polish or hard wax. The one-step polish composed of synthetic hard waxes and reactive components possesses a special slip agent combination that generates high shine and an excellent preservation. Can be processed manually or by machine. Chrome parts can also be excellently cleaned and preserved.

Application/Processing:

Manual processing: Polymer S is evenly applied onto the paint surface to be treated and polished off by using a Polytop polishing cloth. The residue is removed with a Polytop microfibre cloth after the product has dried a little. Machine processing: Polymer S is evenly applied onto the paint surface to be treated and polished off at a speed of 1,500-2,000 r.p.m. Afterwards, remove the dried-on residue by using a Polytop microfibre cloth.

Additionally to this product we recommend:

Polish Bottle, art. no. 229001; Polishing Fleece, cut, art. no. 704071; Fix Polishing Cloth, art. no. 204401, Microfibre Cloth, art. no. 712001, polishing machines and polishing sponges: please see our product programme under the rubric "Accessories Paint Preparation".

Article no:	Packaging unit:
111001	1 l bottle
111005	5 l can
406500	500 ml bottle

revision date: 11.03.2011 - subject to technical modifications
